

Business Continuity Planning for Pandemic Events

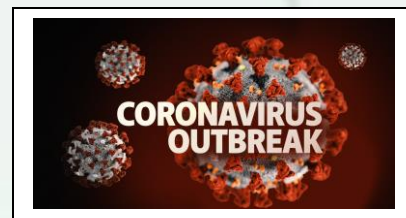

Planning for a pandemic event by business and industry are essential to minimize a pandemic's impact.

In this class we will develop your own Pandemic Policy using the supplied template provided to all students

Pandemic is a global disease outbreak. A pandemic event occurs when a new influenza virus emerges for which there is little or no immunity in the human population, begins to cause serious illness and then spreads easily person-to-person worldwide. A worldwide influenza pandemic could have a major effect on the global economy, including travel, trade, tourism, food, consumption and eventually, investment and financial markets.

In the event of pandemic influenza, businesses will play a key role in protecting employees' health and safety as well as limiting the negative impact to the economy and society. Planning for a pandemic is critical. Pandemic Checklists and Policies identify important, specific activities small and large businesses can do now to prepare, many of which will also help you in other emergencies.

To reduce the impact of a pandemic on your operations, employees, customers and the general public, it is important for all businesses and organizations to begin continuity planning for a pandemic now. Lack of continuity planning can result in a cascade of failures as employers attempt to address challenges of a pandemic with insufficient resources and employees who might not be adequately trained in the jobs they will be asked to perform. Proper planning will allow employers to better protect their employees and prepare for changing patterns of commerce and potential disruptions in supplies or services.

In this informative workshop we will discuss the following topics:

- Who Should Plan for a Pandemic event?
- How Influenza Can Spread Between People
- Classifying Employee Exposure to Pandemic Influenza at Work
- How to Maintain Operations During a Pandemic
- Develop a Disaster Plan
- Protect Employees and Customers
- Work Practice and Engineering Controls
- Administrative Controls
- Steps Every Employer Can Take to Reduce the Risk of Exposure to Pandemic Influenza in Their Workplace

This workshop is Approved for 4 CEU Hours by The Illinois Occupational and Environmental Health and Safety Education and Research Center, The University of Illinois at Chicago School of Public Health

Your Instructor: - Dennis Terpin –ASSP Chicago/ Hawaii Chapter Member

Dr. Terpin is the Retired Senior Industrial Hygienist and Emergency Manager at The University of Illinois at Chicago (UIC).
